

# NCI Data Access and Services

Jingbo Wang  
2015.May

Our data ingest is well underway: [http://nci.org.au/data-collections/data-collections/Collections related to BoM:](http://nci.org.au/data-collections/data-collections/Collections%20related%20to%20BoM)

collection name	available size/target size (TB)
ACCESS model (rr4)	2231/2538
Observation (rr5)	224/366
Ocean-Marine (rr6)	7/380
Reanalysis(rr7)	165/165
Seasonal Climate Prediction(rr8)	369/595
Key Water Assets(fj8)	18/44

eRSA	Intersect	NCI	Pawsey	QCIF(BNE)	VicNode	QCIF(TSV)	TPAC
762	1573	6884	5498	2840	1828	246	1060
2389	6593	10295	6072	6504	4794	1558	2055

Primary Nodes: eRSA, Intersect, NCI, Pawsey, QCIF(BNE), VicNode  
Additional Nodes: QCIF(TSV), TPAC

The NRM seasonally processed part of CMIP5/ACCESS is available:

[http://dapds00.nci.org.au/thredds/catalogs/ua6\\_4/catalog.html](http://dapds00.nci.org.au/thredds/catalogs/ua6_4/catalog.html)

the POAMA data:

[http://dapds00.nci.org.au/thredds/catalog/poama/e24/hindcast/legacy\\_structure/catalog.html](http://dapds00.nci.org.au/thredds/catalog/poama/e24/hindcast/legacy_structure/catalog.html)

ACCESS model reference data: <http://dapds00.nci.org.au/thredds/catalog/rr4/catalog.html>

All datacollections ,dataseries and datasets are discoverable and searchable in our catalogue – <http://geonetwork.nci.org.au/>

Catalogue is ISO19115 compliant and organised at two levels:

- Top level has single entry for each data collection,series of dataset.
  - It is organised as parent-child relationships where sets live within collections etc.
  - Catalogue include detailed product descriptions, geospatial extents, license conditions, location of data, and contacts.
- Lower level has all attributes of the data.
  - Reference to lower catalogue is listed in the top level catalogue under transfer options.

*Some datasets are still coming online and being sorted out from data collections.*

catalog

Catalog

- Top

#### Parent/child metadata:

- ARC Centre of Excellence for Climate System Science Datasets Collection
  - [ACCESS1.3b model output from the Amazonian Deforestation \(AMZDEF\) experiment v1.0](#)
  - [WRF model outputs from the 2-km resolution Sydney experiment \(v1.0\)](#)

able in our

n collections

nts, license

- Lower level has all attributes of the data.
  - Reference to lower catalogue is listed in the top level catalogue under transfer options.

*Some datasets are still coming online and being sorted out from data collections.*

## NCI GeoNetwork architecture

CSW Harvesting and Cross-walks (eg RIF-CS Adapter)

	Geonetwork: Collection (and Series?)
	Dataset 1
	Dataset 2
	Dataset 3
	...

Domain Specific or User deep query

	Full Search GeoNetwork (or domain)
	Dataset 1
	Dataset 2
	Dataset 3
	...

Full harvest of the metadata

	Dataset 1

	Dataset 2

	Dataset 3

	Dataset n

Dataset specific Geonetworks

- Data belonging to formal collections may be made available for public access through NCI, using THREDDS or Hyrax.
- The Geonetwork catalogue will point to the relevant data services.
- Listed under “transfer options”. Typically they will be:
  - HTTP download
  - OPeNDAP services
  - OGC web services (WMS, WCS, WFS, WPS)
  - NetCDF subsetting service
  - Filesystem path for users with appropriate project membership (findable in GeoNetwork)
  - Other services, eg. ERDDAP
- Programmatic authenticated access via web services nearly available.

openstack™

User Support for Climate, Weather and Earth Observations users now started. 3 EFT – Claire Trenham (lead).

Working alongside data collections team.

Please send emails to the data collection [datacollections@nci.org.au](mailto:datacollections@nci.org.au)

Ben Evans will give a talk at BoM on 18 June and give a more complete update.

# Thank you

What happens if you request to connect a project

1. fill the form online
2. CI of the project will receive an email for approval
3. NCI help desk will take action as indicated by the CI of the project

Note: The CI of BoM data collections (rr4, rr5, rr6, rr7, rr8, fj8) is Robin Bowen.
